

## Protect your farm's most important assets with new 15 year Tanalith E OctoPost

Whether you need to fence them in or keep things out, our unique octagonal wooden posts help you create enduring value for generations to come. Leading supplier of Fencing products throughout the UK and Ireland.

All our timber is sourced from carefully managed forests in Sweden, which have been inspected and certified to ensure their sustainability.

### New Tanalith E OctoPost

This product will still be our high quality kiln dried pine posts but now treated with a high level 25kg of the Tanalith E preservative in a vacuum pressure timber impregnation plant, giving them a warranty of 15 years and suitable for the grant schemes.

Tanalith® E is a water-based, high pressure wood preservative that is industrially applied. When impregnated into the timber through a high-pressure process, Tanalith® E components bond with the wood structure and cannot easily be removed, helping to significantly extend its service life.

### What sets Tanalith® E OctoPost apart?

- Introduced in 1992, Tanalith® E has 30 years proven performance.
- The primary ingredient is copper, formulated in conjunction with organic co-biocides.
- Timber used is pine and kiln dried before treating. Giving the product the 15 year warranty suitable for grant schemes.

### Don't judge a post purely on its colour

A popular saying is not to judge a book by its cover. We think the same applies to the term 'green treated timber' when used in the context of pressure treated wood. Also commonly referred to as 'Tanalised Timber', not all green treated timber is treated to the same standard. A number of factors play a part in this – timber species, end-use application, how the timber is treated, and the wood preservative used. Ensure a quality treatment process.
