

# RESEEDING

## Ten point plan

1. Soil test – target pH is 6.2-6.5, and target P & K index 3
2. Spray off the old sward with glyphosate
3. Cultivate to ensure a fine, firm seed-bed. Apply lime to correct pH
4. Select a grass mixture based on intended field use e.g. grazing or silage
5. Sow 14kg/acre into warm, moist soil conditions
6. Roll well to ensure good soil-seed contact
7. Apply N, P and K as per guidelines
8. Monitor reseed for pests e.g. frit-fly, leatherjacket, rabbits & take immediate action where necessary
9. Post-emergence weed spray is essential approx. 6 weeks after sowing and before the 1<sup>st</sup> grazing
10. Graze the new reseeds frequently at low covers to encourage tillering of the sward

### Post-Emergence Spray

#### Pastor Trio

Can be applied between 1st Feb to the 31st Aug at a rate of 1lt per Ha. Controls chickweed including mouse eared chickweed, thistles, buttercups, dandelions, daisies and docks.

**Not Clover Safe.**

For more information regarding Post Emergence Spray Options and Clover please consult our Sales Team.

We can advise on all aspects of reseed, from sprays, grass mixtures, weed control and fertiliser planning.

Bandon Co-op has a comprehensive range of grass seed mixtures to suit almost all farm situations but should you require any special mixes or further information please contact our Agri Division:

## Grass Seed Mixtures

Containing the best varieties on the 2021 Teagasc Pasture Profit Index

2021

bandoncoop.ie/agri 

Our mixtures contain varieties which are listed on the current DAFM Recommended List and the Teagasc Pasture Profit Index, meaning they have proven performance under our growing conditions and will deliver more to your grazing or silage swards.

Our mixtures are formulated with our local Teagasc advisors to bring the best swards to the area.

## 1. Intensive Silage

A high yielding, high quality silage mixture designed for an intensive 2-cut system.

Kg/acre	Variety	Heading Date
5.0 <b>NEW</b>	Gracehill (T)	4 June
3.0	AberMagic (D)	28 May
4.0	AberWolf (D)	30 May
<b>12.0 kgs</b>		

- Suited to a 2-cut silage system with the first cut aimed at late May
- Forms a dense and persistent silage sward
- Good aftermath grazing
- Excellent yield and quality

## 2.A. Intensive Grazing Mixture

A high quality, high yielding, palatable mixture for intensive grazing systems.

Kg/acre	Variety	Heading Date
3.3	AberClyde (T)	25 May
3.3	AberGain (T)	4 Jun
2.0	Drumbo (D)	5 Jun
2.8	AberChoice (D)	11 Jun
0.6	Med White Clover	
<b>12.0 kgs</b>		

**Note: Also available without Clover (AberClyde 3.5kg, AberGain 3.5kg, Drumbo 2.0kg, AberChoice 3.0kg)**

- AberGain is the highest quality variety on the Teagasc PPI for 2021
- Contains AberChoice which leads the PPI Late Diploid Table
- Excellent digestibility
- Very palatable varieties for higher animal intakes

## 3.A. Cut & Graze Mixture

This mixture results in a dense leafy sward suited to rotational grazing or set stocking, but also offers the potential for a heavy silage cut in late May or Early June.

Kg/acre	Variety	Heading Date
5.0	Dunluce (T)	29 May
3.0 <b>NEW</b>	Ballyvoy (D)	3 June
4.0	AberChoice (D)	11 June
<b>12.0 kgs</b>		

**Note: Also Available with Clover (Dunluce 5.0kg, Ballyvoy 3.0kg, AberChoice 3.4kg, Med White Clover 0.6kg)**

- Will allow a heavy, quality silage cut in late May
- Ballyvoy - highest late heading variety for spring growth & excellent quality
- AberChoice & Dunluce are proven varieties on Irish farms

## Overseeding Mix

Designed to improve yield and quality in existing swards.

Kg/acre	Variety	Heading Date
6.0	AberClyde (T)	25 May
6.0	AberGain (T)	4 Jun
<b>12.0 kgs</b>		

- \* **It is recommended to apply slugs pellets at time of overseeding**
- Contains 100% Tetraploid varieties - ideal for overseeding
- AberGain tops overall variety for quality
- Forms a high quality, high digestibility sward
